Friction Points Analysis

Identifyingpainpointsthatimpactusertrust,engagement,andretention in the payment journey

Step	Problem	Impact
Add Payee	Manual entry errors, contact sync issues	Failed payments, user frustration
Enter Amount	Uncertainty about limits, offers, or fees	Hesitation, calculation errors
Authentication	OTP delays, biometric failures	Drop-offs, retry attempts
Payment Success	Network issues, server errors	Reduced trust, confusion

AI Product Improvements

Two strategic AI features to reduce friction and enhance user experience

1

SmartPay Alert AI

Function: Monitors upcoming bills and autopay schedules, checks account balance, predicts potential payment failures

Intervention: Sends contextual alerts with actionable options: add funds, reschedule payment, or use backup account

Metrics: Failed autopay percentage, alert engagement rate, on-time payment improvement

2

Smart Budget Forecasting AI

Function: Predicts weekly and monthly spending patterns using transaction history and upcoming bills

Intervention: Suggests actionable budget adjustments and auto-savings recommendations to prevent overspending

Metrics: Overspending reduction, savings rate, user engagement with recommendations

Agentic AI Workflows

SmartPay Alert AI

01

AI monitors bills & autopay

02

Checks account balance

03

Predicts payment risk

04

Sends alert with options

05

User approves or AI executes

Budget Forecasting AI

01

AI analyzes transaction history

02

Forecasts balance & spending

03

Suggests adjustments

04

User approves recommendations

GTM Roadmap & AI Implementation

1

Phase 1 (0–2 months)

Feature: SmartPay Alert AI deployment

Metrics: Failed autopay percentage, alert engagement rate, user satisfaction score

2

Phase 2 (2–4 months)

Feature: BudgetForecastingAIlaunch

Metrics: Overspending reduction, savings rate, retention rate improvement

3

Phase 3 (4–6 months)

Feature: CombinedAIfeatureswithpersonalized recommendations

Metrics: User satisfaction, engagement rate, revenue from premium features

AI Assistance Note: ChatGPT was used to structure analysis, brainstorm AI features, and suggest metrics. Final reasoning, prioritization, and strategic decisions were completed manually with product management expertise.
